## PREFACE

Dr. Annandale's *Concise Dictionary*, which has won and long maintained a leading place among dictionaries of moderate size, has now been re-set in Perpetua—a modern type of exceptional legibility. In carrying out the re-setting the opportunity has been taken to transfer to the body of the book some two thousand words which hitherto appeared in the Supplement, and also to add some two hundred and fifty words which did not appear anywhere in the earlier editions of the book. The Dictionary will be found to include many of those recent coinages which are generally accepted as legal tender. In order to make room for these additions some obsolete, dialectical, or rare words have been removed. Had this not been done, the volume would have exceeded its limits. A dictionary of moderate size must of necessity be selective in its choice of words admitted. Words are sometimes excluded with regret, simply because their inclusion would mean the sacrifice of even more valuable entries.

The definitions and etymologies of well-established words have been carefully revised.

In order to condense the matter as much as possible, the method of grouping certain words together in one paragraph, instead of giving each a separate paragraph to itself, has been adopted. Only such words as are closely connected in origin, form, and meaning are thus grouped—the group very often consisting of a primary word followed by a number of derivatives, compounds also being grouped under the word that forms their first element. Besides economizing space, this plan often shows the meaning of the words grouped more satisfactorily than could be done if each were explained by itself. As it is sometimes difficult to decide how far the principle of grouping should be carried, or where to set the limits of a group, no hard-and-fast line has been drawn, convenience and facility of reference being generally allowed to decide the matter. The alphabetical arrangement is disturbed as little as possible; but when a word is shifted to any great extent from its natural alphabetical position a cross reference is given from this position to the leading word under which it may be found. Hence no reader need have any difficulty in finding the word he wants.

In order to save space the more unimportant abstract nouns ending in *-ness*, and adverbs ending in *-ly*, have often been omitted altogether or left without a definition, their meaning being made sufficiently clear by the definition of the word from which they are derived.

The method adopted for exhibiting the proper pronunciation of the words is simple, and will indeed be understood at a glance, the key-words for the different sounds being shown at the foot of every page. It has not been thought necessary to show the pronunciation of compound words when both their elements are pronounced independently and neither of them receives special emphasis.

# HINTS ON ENGLISH ETYMOLOGY

THE English language is one of a group of closely allied languages which are known by the general name of the Teutonic or Germanic tongues. The other languages of the group, some of which are more closely connected with English than the rest, are Dutch, German, Danish, Icelandic or Old Norse, Swedish, and Gothic; to which may be added, as of less importance and having more the character of dialects, Norwegian, Frisian, the Plattdeutsch or Low German of Northern Germany, and Flemish, which differs little from Dutch. The evidence that all these languages are closely akin is to be found in the great number of words that they possess in common, in the similarity of their structure, their inflections, their manner of compounding words—in short, in their family likeness. This likeness can only be accounted for by supposing that these languages are all descended from one common language, the primitive Teutonic, which must have been spoken at a remote period by the ancestors of the present Teutonic peoples, there being then only one Teutonic people as well as one Teutonic tongue. In their earliest form, therefore, and when they began to be differentiated, these languages must have had the character of mere dialects, and it is only in so far as each has had a history and literature of its own that they have attained the rank of independent languages. The rise of dialects is a well-known phenomenon, taking its origin in the perpetual change to which all languages are subject. A language that comes to be spoken over a considerable area and by a considerable number of persons—more especially when not yet to some extent fixed by writing and literature—is sure to develop dialects, and each of these may in course of time become unintelligible to the persons using the others, if the respective speakers have little intercourse with each other, being separated by mountain ranges, arms of the sea, or merely by distance. In this way is the existence of the different Teutonic tongues to be accounted for. A similar instance of several languages arising from one is seen in the case of Italian, French, Spanish, and Portuguese, all of which are descended from the Latin. Of the common origin of these we have, of course, direct and abundant evidence.

The Gothic language presents us with the earliest specimens of any Teutonic speech that we possess. This tongue, which has long been extinct, is known to us almost solely from fragments of a translation of the Bible made by Bishop Ulfilas or Wulfilas, about A.D. 360. These remains, scanty as they are, are of the highest importance to the student of Teutonic philology. Next to Gothic in the antiquity of its literary remains comes English. The earliest form of English, say

English as used up to A.D. 1100, is usually called Anglo-Saxon, though many now call it Old English. In this dictionary Old English is applied to a later stage of the language than what belongs to the Anglo-Saxon period, yet it must never be forgotten that Anglo-Saxon is really Old English, and that there has been no break in the life of the English language since it was introduced into Britain by the Saxons, Angles, and Jutes. Anglo-Saxon, however, is very different from modern English. It possesses many inflections long since lost and many words long since gone out of use, and, indeed, has to be studied by a modern Englishman as if it were a foreign tongue.

The Teutonic tongues, with the primitive or parent Teutonic from which they are descended, have been proved by the investigations of philologists to belong to a wider group or family of tongues, which has received the name of the Aryan, Indo-European, or (especially in Germany) Indo-Germanic family. The chief members of this family are the Teutonic, Slavonic (Polish, Russian, Bohemian), Lithuanian, Celtic (Welsh, Irish, Gaelic, &c.), Latin (or Italic), Greek (or Hellenic), Armenian, Persian, and Sanskrit.

How remote the period may have been when the ancestors of the Teutons, the Celts, the Slavs, the Greeks, Romans, Persians, and Hindus were living together and speaking a common language is uncertain. Yet the general character of their language is approximately known, and philologists tell us with some confidence what consonant and what vowel sounds the Aryan parent-speech must have possessed, what were the forms of its inflections, and what, at the least, must have been the extent of its vocabulary, judging from the words that can still be traced as forming a common possession of the sister tongues of the family.

The Aryan tongues, ancient and modern, are entitled to claim the first rank among the languages of the globe, both for richness, harmony, and variety, and more especially as embodying a series of literatures to which no other family of tongues can show a parallel.

The exact relationship which the different Aryan languages bear to each other has been much discussed, and the question is not yet settled. It has been maintained, for instance, that Latin and Greek are more closely akin to each other than to any other languages of the family. Some, on the other hand, have insisted that Latin is more nearly akin to Celtic than to Greek. It is generally admitted that Sanskrit and Persian are closely akin. The following scheme, in the form of a genealogical table, exhibits the most commonly accepted theory as to their relationship:

By those who have learned something vaguely of the antiquity and linguistic importance of Sanskrit, this language is sometimes supposed to be the parent-speech of English and other European tongues. The above table shows how erroneous such a notion is, Sanskrit being only a collateral relative.

Though English is a Teutonic language it has admitted into its vocabulary a vast number of non-Teutonic words—more especially words of Latin origin that have passed through the French. If we consider merely the vocabulary, therefore, English may be said to be a composite language. But in structure it is entirely Teutonic; in its grammar, its inflections, its formative elements, &c., it remains true to its origin. And we must remember that the Franco-Latin, or foreign portion of its vocabulary, has a very different character from the Teutonic. The latter is indispensable, the former is not.

It is probably the fact of our language containing so many extraneous elements, combined with the idea of Anglo-Saxon being a separate language from English, that has led to the popular notion that all English words are 'derived' from some foreign source. It is to be feared there are too many persons who, when they learn, for example, that the German *haus* means the same as English *house*, think that in some mysterious way the English word is derived from the German. But this word, and the same of course is the case with a great many others, belongs to the earliest period of the language (Anglo-Saxon); and the reason why similar forms appear in the German and the rest of the Teutonic tongues is because they all have these slightly varying forms as a common inheritance from the primitive Teutonic. Even when the original of a modern English word cannot be found in Anglo-Saxon the word is not necessarily borrowed or derived from any other language. If it clearly has Teutonic relatives its absence from Anglo-Saxon may be accounted for by the imperfection of the records; for there can be little doubt that words were used in Anglo-Saxon times that we do not find in the literary remains of the period. The same must be the case also in regard to the other Teutonic tongues, and thus the history of some of our common words is very defective. In the etymologies of this dictionary the Anglo-Saxon original of any English word is always given when it is known, and the form the word assumes in the other Teutonic tongues is added for the sake of comparison, and to show how widely the word is spread. Sometimes only certain words supposed to be connected with the one in hand are all that can be given.

In order to understand how it is that many words in the different Aryan tongues are really of the same origin, though superficially they may appear very different, it is necessary to know something of Grimm's Law. This law, which, like a natural law, is simply a statement of observed facts, is so named from the great German philologist who first definitely laid it down as the result of observation and comparison of the relative linguistic phenomena. It concerns the so-called 'mute' consonants and takes effect more especially when these are initial. According to it, in words and roots that form a common possession of the Aryan tongues, being inherited by them from the parent-speech, where in English (more especially Anglo-Saxon) and in most of the Teutonic tongues we find *t*, *d*, or *th*, we find in Latin, Greek, and Sanskrit, not these letters, but respectively *d* instead of *t*, an aspirated sound instead of *d*, and *t* instead of *th*. That is, an English *t* corresponds to a Latin, Greek, and Sanskrit *d*, as is seen in *tame* compared with *L. domare*, *Gr. damaein*, *Skr. dam*, to tame; an English *d* corresponds to Latin *f*, Greek *th*, Sanskrit *dh*, as in *E. door*, *L. fores*, *Gr. thyra*, *Skr. dvāra* (for original *dhvāra*), a door; an English *th* corresponds to Latin, Greek, and Sanskrit *t*, as in *thin*, compared with *L. tenuis*, *Gr. tanaos*, *Skr. tanu*, from root

*tan*, to stretch. If we next take the gutturals we find that English *k* (or *c* hard), *g*, *h*, correspond respectively in the above languages to *g*, *h* (*ch*, *gh*), *k*, as is seen in *E. kin*, *L. genus*, *Gr. genos*, *Skr. janus* (where *j* is for original *g*); *E. goose* (modified from original *gans*), compared with *L. anser* (for older *hanser*), *Gr. chēn*, *Skr. hansa*; *E. head* (*A.Sax. heafod*), *L. caput*, *Gr. kephale*, *Skr. kapāla*. Similarly *b* in English corresponds to *f* in Latin, *ph* in Greek, and *bh* in Sanskrit, as in *brother* = *L. frater*, *Gr. phratēr*, *Skr. bhrātṛ*, a brother; *f* in English to *p* in Latin, Greek, and Sanskrit, as in *father* = *L. pater*, *Gr. patrēr*, *Skr. pitṛ*, father. German exhibits certain letter changes peculiar to itself, and for this reason is placed, in any full statement of Grimm's law, apart from the other Teutonic tongues. In German, for instance, *t* takes the place of an English *d*, as in *G. tag*, *E. day*, *G. teil*, *E. deal*; *d* the place of *th*, as in *G. ding*, *E. thing*, *G. drei*, *E. three*, &c. In some cases the law does not operate in consequence of the influence of other letters; thus the *s* of *stand* prevents the *t* from becoming *th*, as it ought to do to correspond with *L. stare*, to stand. Similarly *take* and *L. tango*, to touch, are believed to be allied words though both have the consonant *t*, because they are considered to be both from the root *stag* (the *n* in *tango* being inserted as is often the case). Certain exceptions to the law are accounted for by a subsidiary law of more recent discovery than Grimm's law, known as Verner's Law, and formulating certain facts connected with the original accentuation of Aryan words.

The correspondence of English words with cognate words is often fully seen only when we take them in their earliest or Anglo-Saxon form or when we note their spelling and know what their original pronunciation was. Thus the verb to *lean* corresponds to *L. clino* (in *incline*), *Gr. klinō*, but we might not have been sure of this had we not had the *A.Sax. hlinian*, to lean, in which the *h* (afterwards lost) represents the Latin and *Gr. k* as Grimm's law demands.

In their transition to modern English Anglo-Saxon words undergo various changes, some of which take place with great regularity; thus *d* becomes *ō* or *oa*, as in *A.Sax. hām*, *E. home*, *A.Sax. dc*, *E. oak*, *A.Sax. bāt*, *E. boat*; *æ* becomes *ee* or *ea* (with same sound), as *āel*, *E. eel*, *slēpan*, *E. to sleep*, *sēa*, *E. sea*; *ē* becomes *ee* or *ea*, as in *fēlan*, to feel, *cēpan*, to keep, *grēne*, green, *rēdan*, to read; *ō* becomes *oo* or its equivalent, as *A.Sax. tō*, *E. to*, *too*, *A.Sax. dōm*, *E. doom*, *A.Sax. mōd*, *E. mood*; *ū* becomes *ou*, as in *A.Sax. fūl*, *E. foul*, *A.Sax. mūth*, *E. mouth*, *A.Sax. hūs*, *E. house*, &c. Among consonantal changes may be noted the softening of the *k* sound to the palatal *ch*, as in *church*, *birch*, *watch*, *wretch*, &c.; and the softening of *g* into the *j* sound, *w* or *y*, as in *A.Sax. ecg*, *E. edge*, *A.Sax. hrycg*, *E. ridge*, *A.Sax. gnagan*, *E. gnaw*, *A.Sax. dæg*, *E. day*, *A.Sax. gēdr*, *E. year*.

Since there are so many words of French origin in English it may be as well to state that in early French there was a declension in substantives and adjectives based on the Latin declension, and with special forms for the nominative and accusative. Afterwards when only one form was retained for the noun as subject and as object it was the old accusative (based on the Latin accusative) that as a rule determined this general form; so that such a word as *motion*, for example, does not come from the Latin nominative *motio*, but from the accusative *motionem*; such a word as *favour* is not from *L. favor*, but from *favorem*. It is customary, however, in etymologies to give the nominative as the typical form of the noun, and to say that *motion* is from *motio*, *motionis*, the genitive being given to show the declensional character. Besides, many French words, being taken directly in modern times from the Latin dictionary, are not as a matter of fact based on the accusative though formed after the same model as those that are historically so.

# KEY TO THE PRONUNCIATION

In showing the pronunciation the simplest and most easily understood method has been adopted, that of *re-writing* the word with a set of letters that have invariably the same *sound*, no matter by what letter or letters the sounds may be expressed in the word whose pronunciation is shown. The *key* by this means is greatly simplified, the reader having only to bear in mind one mark for each sound. Sounds and letters, it must be remembered, are often very different things. In English there are a great many more sounds than letters to represent them, so that some of the letters stand for more than one sound, the letter *a*, for instance, having at least six or seven, namely those given in the accompanying table and two others, as in the words *any* and *quality*, which may be better represented by *e* and *o* respectively. Our alphabet is therefore very far from being a perfect alphabet, which would have a distinct letter for each sound, and would always represent the same sound by the same letter. The following is a list of characters and key-words used to show the pronunciation in the dictionary.

## Vowels

|                       |                             |
|-----------------------|-----------------------------|
| ā.....as in.....fate. | ō.....as in.....note.       |
| ä.....".....far.      | o.....".....not.            |
| a.....".....fat.      | ö.....".....move.           |
| ā.....".....fall.     | ū.....".....tube.           |
| ē.....".....me.       | u.....".....tub.            |
| e.....".....met.      | ü.....".....bull.           |
| è.....".....her.      | ü.....".....Fr. <i>dû</i> . |
| i.....".....pine.     | oi.....".....oil.           |
| i.....".....pin.      | ou.....".....pound.         |

## Consonants

|                         |                          |
|-------------------------|--------------------------|
| ch.....as in.....chain. | ng..... as in .....sing. |
| ch.....".....Sc. loch.  | th.....".....then.       |
| Ger. nacht.             | th.....".....thin.       |
| j.....".....job.        | w.....".....wig.         |
| g.....".....go.         | wh.....".....whig.       |
| ñ.....".....Fr. ton.    | zh.....".....azure.      |

The above system, it is believed, will be sufficient for all practical purposes, and the average reader will not care for greater nicety, and will not be likely to cavil though the vowel sounds in *there* and *fate* (like those in *more* and *note*) are both represented by the same character. Consonants not in the list are used simply with their ordinary sounds.

**Accent.**—Words consisting of more than one syllable receive an accent, as the first syllable of the word *labour*, the second of *delay*, and the third of *comprehension*. The accented syllable is the most prominent part of the word, and is denoted by the mark ' , as in the words *la'bour*, *de'lay*, and *comprehen'sion*.

Many polysyllabic words are pronounced with two accents, the primary and the secondary accent, as the word *excommunication*, in which the third as well as the fifth syllable is commonly accented. The accent on the fifth syllable is the primary accent, and when it requires to be indicated in the pronunciation it receives a double mark, thus " , the secondary or inferior accent receiving only the single mark ' , as in *excommu'nica'tion*.
